Policy and Strategy of the Maintenance of Water Body and its Distribution System

- The college has two ponds.
- There are scheduled staff members who maintain the water bodies regularly.
- Water bodies are being used for fish cultivation too.
- Rain water from different Hostel buildings are taken to the ponds in such a way that they are not contaminated.
- Rooftops are also kept cleaned so that unnecessary garbage does not make the rain water dirty.
- Water reservoirs are kept above the roof top and also there underground reservoirs.
- They are directly connected with the Water Treatment Plant of the Belur Math wherefrom, purified water come to the roof top tanks.
- These are automated so that no water overflow occurs.
- From the roof top tanks water is distributed through PVC pipe lines.
- Bore well and Open well are also used for garden water.
- In fact the rain water is also used for gardening.
